CS 452

Presentation Project

For this project you will be assigned to work in groups (size three to the extent possible).

1. Choose (be assigned) an article from the references listed below (or find one of your own and have it approved).

2. Give a 10-minute presentation on your article (each taking a fair share). Use the following checklist in preparing your presentation.

   • Take-home message clear?
   • Appropriately self-contained?
   • Opening appropriate?
   • Motivating preamble?
   • Complex issues explained gently?
   • Results explained clearly?
   • Slides simple?
   • Talk rehearsed?
   • Confident delivery?
   • Clear conclusion?
   • Questions anticipated?

3. Submit one exam question about your presentation. The final exam question should be a multiple-choice question. Also, provide the expected answer. (Some of these will appear on the final exam.)

   To hand in the project, send email to your instructor (one email from each group). Attach your presentation. (I’ll post these for others in the class to review.) And, include your exam question and answer directly in the email message.

Grading: 75 points
